

The BIAS project was established in September 2012 to support a regional assessment of the underwater sound in the Baltic Sea. The project has five objectives. The first is to raise awareness among authorities and managers. The second is to establish a regional implementation. The third objective is to assess the level of underwater noise and to present the results as soundscape maps. The fourth objective is to establish regional standards and methodologies that will allow for cross-border handling of data and results and finally to implement regional tools for handling of underwater sound.

**REGISTER NOW:**

## BIAS End-of-Project Workshop

### 1-2 June 2016

The BIAS Team wishes to inform you that it is now time to register to the BIAS End-of-Project Workshop, to be held 1-2 June 2016. The final results of BIAS, including the soundscape maps, will be presented and there will also be a demonstration of the GIS-based planning tool.

**When:** 1 June 11:30 – 2 June 12:00 CET

**Venue:** Gothenburg, Sweden

**Registration:** <https://bias-project.eu/meetings/bias-end-of-project-workshop/registration>

Practical information including the program, location, details about travel and accommodation will follow.

Updates will be posted on <https://bias-project.eu/meetings/bias-end-of-project-workshop/>.
